

Rollbag R785 Automatic Bagger

All-Electric Tabletop Poly Bagging

The Rollbag™ R785 is a unique, all-electric tabletop automatic poly bagger. This compact automatic bagger uses the same electronics as our larger floor standing baggers, making it a dependable, industrial quality, multi-shift packaging solution. Using an advanced control system, the R785 is able to operate at a rate of up to 40 bags/min, ensuring that machine speed is not the limiting factor in your packaging operation.

The Rollbag R785 automatic bagger does not require compressed air, which means the facility needs no modification. This bagger can easily be moved around the production environment, and may be set up virtually anywhere with an ordinary electrical outlet. Positioning this poly bagger is made even easier as its small footprint (26" wide x 18" deep), and light weight (just over 100 lbs) make it easy to move. The R785 poly bagger can be loaded by hand (semi-automatically) or automatically using infeed devices that can interface directly with the PLC. The R785 automatic bagger can be cycled by pressing a footswitch, tapping the seal bar, or the machine may be cycled automatically.

As flexibility is critical for packaging products in poly bags, the R785 automatic bagger is engineered to accommodate bags on a roll up to 12" wide and 20" long. The high-power sealing magnet creates hermetic seals in materials up to 5 mil thick.

The R785 automatic poly bagger features a user-friendly touchscreen interface with the capacity to store up to 50 jobs. Job storage makes product set-up a breeze. Furthermore, the rolls of pre-opened bags are loaded from the front, so access to the back of the machine is not required during regular operation.

The R785 automatic bagger has a host of standard features – most of which are not available on other all-electric poly baggers. One example is the seal flattener feature where fingers automatically stretch the poly bag tight prior to sealing bag tight prior to sealing. This step can minimize wrinkles in the seal. The articulating bag support allows heavy products to be handled more easily, by supporting the bottom of the poly bag during packaging. At the end of the cycle this support automatically tilts down, allowing the product to drop into a bin or conveyor. The load shelf can be adjusted to various angles, ensuring optimal set-up for bulky products.

R785 works with a range of materials, sizes, and thicknesses

Articulating bag support for packaging heavy products

7" HMI touchscreen interface for ease of set-up and operation

Safety is a critical consideration in every production environment. With a CE compliant design, you can be assured that R785 automatic poly bagger meets the latest safety standard for packaging machinery. Owing to its unique design, the seal bar on the R785 bagger closes without force, virtually eliminating any chance of injury.

Truly a next-generation automatic poly bagging solution, the R785 is the first all-electric bagger that offers an optional, integrated label printer applicator. This off-the-shelf industrial labeling option prints and applies a label on the first bag to be fed out. This approach is ideal for applications like poly mailers that require a shipping label or other data that changes with each bag. With the ability to print and apply a scannable barcode label directly on the bag, it is possible to use bags that are clear on both sides. As the label printer applicator works with direct thermal labels, as well as thermal transfer, printer ribbon is eliminated.

Custom pre-printed labels with high color graphics can also be used, for a customer experience that greatly enhances your brand. The R785 automatic bagger is particularly effective for short batch runs and is the ideal for customers who are currently packaging and labeling their product by hand in reclosable zipper bags.

With labor costs rising, everyone agrees that maximum uptime is critical. The robust R785 is built to last, however after years of use components can fail. Therefore, the R785 has been designed with as many off-the-shelf components as possible. Furthermore, side covers are properly secured with only a handful of screws so they can be removed quickly and easily. The result is that all internal components of the machine can be accessed in minutes. In addition, the seal bar can easily be changed out by unfastening readily accessible bolts. For added peace of mind, we will extend the warranty of our R785 (from the standard one year) up to five years, with the exclusive use of Rollbag™ brand of pre-opened bags on a roll.

The Rollbag R785 automatic poly bagger works well in a wide variety of poly bagging applications. These include mail order fulfillment, aerospace, injection molding, kitting, pharmaceutical, medical device, automotive, food, and more.

Operating Benefits

- Operate with a footswitch, by hand, or in auto cycle mode
- Adjustable height articulating load shelf to support the bag during packaging (13" max bag length)
- Seal flattener fingers minimize wrinkles in the seal area by stretching the bag prior to sealing
- Print and apply a label directly on the next bag being fed out (optional)
- Compact design takes up minimal footprint in the packaging area
- 7" color touchscreen with user-friendly interface and clear prompts

Set-Up Benefits

- Uses Rollbag pre-opened bags-on-a-roll for quick bag size changes and easy set-up
- PLC with job storage, batch counters, packaging statistics, and login-in levels
- Interface to infeed devices for a fully automatic packaging system
- Ceramic heating element for fast start-up

With its hinged cover design, easily access the inside of the machine for maintenance and troubleshooting purposes

Maintenance Benefits

- Off the shelf modular components for easy replacement
- Remote networking capability for improved troubleshooting
- Self-diagnostics ensure quick problem solving
- Quick service access to all electrical components
- Comprehensive 5 year warranty (optional)

Safety Benefits

- Zero force seal bar closing virtually eliminates the chance of operator injury
- Low power consumption design (500 Watts)
- CE compliant design for improved safety and troubleshooting

Available Options Include:

- Air Expeller— A plate with a foam pad. This device presses against the bag prior to sealing, removing excess air. This option is ideal when there is no vent hole in the bag.
- Label Printer Applicator—An integrated industrial label printer applicator. With this option you can automatically print and then apply a label onto the next bag to be fed out.
- 305 dpi Printhead Upgrade (requires integrated label printer applicator), perfect when high resolution printing is required.
- Easy Touch Start Sensor—Magnetic Mount. A portable sensor that can be moved to the optimal location for the bagging process. This sensor detects the presence of the operator's hand on the button and then the machine automatically cycles.
- 220V Wiring—For facilities that require 220V electrical instead of 120V.
- NiceLabel Designer Pro Label Software—While our label printer applicator works with various label software, we recommend and support NiceLabel Designer Pro.
- Tabletop Console Stand — Adjustable height stand for Rollbag tabletop baggers. Available with casters to move the machine around.

Seal flattener fingers go into the bag and stretch the top tight during sealing, to create a straight and clean final seal appearance

Rollbag R785 shown with the integrated label printer applicator, which automatically prints and applies a label on the first bag to be fed out

Portable Easy Touch Start Sensor is a magnetic mounted sensor that can be moved to the optimal location for the bagging process.

Rollbag R785 Bagger Specifications

Speed	Up to 40 bags/min (up to 30 with label printer)
Bag Width	2"–12"
Bag Length	3"–20"
Seal Width	1/8"
Bag Thickness	1–4 mil
Electrical	120V, 5A
Dimensions	26" W x 18" D x 24"H (36" D with label printer applicator)
Weight	105 lbs
Warranty	1-year, extendable to 5-years when exclusively using Rollbag brand material
